### India's External Debt as at the end of March 2025

The stock of external debt at end-March 2025 as well as revised data for earlier quarters are set out in [Statements I \(IMF format<sup>1</sup>\)](#) and [II \(old format\)](#). The major developments relating to India's external debt as at end-March 2025 are presented below.

#### Highlights

- At end-March 2025, India's external debt was placed at US\$ 736.3 billion, an increase of US\$ 67.5 billion over its level at end-March 2024 ([Table 1](#)).
- The external debt to GDP ratio increased to 19.1 per cent at end-March 2025 from 18.5 per cent at end-March 2024.
- Valuation effect due to the appreciation of the US dollar *vis-à-vis* the Indian rupee and other currencies amounted to US\$ 5.3 billion. Excluding the valuation effect, external debt would have increased by US\$ 72.9 billion instead of US\$ 67.5 billion at end-March 2025 over end-March 2024.
- At end-March 2025, long-term debt (with original maturity of above one year) was placed at US\$ 601.9 billion, recording an increase of US\$ 60.6 billion over its level at end-March 2024.
- The share of short-term debt (with original maturity of up to one year) in total external debt declined to 18.3 per cent at end-March 2025 from 19.1 per cent at end-March 2024. However, the ratio of short-term debt (original maturity) to foreign exchange reserves increased to 20.1 per cent at end-March 2025 (19.7 per cent at end-March 2024).
- Short-term debt on residual maturity basis (*i.e.*, debt obligations that include long-term debt by original maturity falling due over the next twelve months and short-term debt by original maturity) constituted 41.2 per cent of total external debt at end-March 2025 (43.4 per cent at end-March 2024) and stood at 45.4 per cent of foreign exchange reserves (44.9 per cent at end-March 2024) ([Table 2](#)).
- US dollar-denominated debt remained the largest component of India's external debt, with a share of 54.2 per cent at end-March 2025, followed by debt denominated in the Indian rupee (31.1 per cent), yen (6.2 per cent), SDR<sup>2</sup> (4.6 per cent), and euro (3.2 per cent).

<sup>1</sup> The concepts set out in the IMF's 2013 *External Debt Statistics (EDS) Guide* are harmonized with those of the *System of National Accounts (SNA) 2008* and the sixth edition of the IMF's *Balance of Payments and International Investment Position Manual (BPM6)* published in 2009.

<sup>2</sup> SDR: Special Drawing Rights.

- Outstanding debt of both government and non-government sectors increased at end-March 2025 over the level a year ago ([Table 3](#)).
- The share of outstanding debt of non-financial corporations in total external debt was the highest at 35.5 per cent, followed by deposit-taking corporations (except the central bank) (27.5 per cent), general government (22.9 per cent) and other financial corporations (9.4 per cent).
- Loans remained the largest component of external debt, with a share of 34.0 per cent, followed by currency and deposits (22.8 per cent), trade credit and advances (17.8 per cent) and debt securities (17.7 per cent) ([Table 4](#)).
- Debt service (*i.e.*, principal repayments and interest payments) marginally declined to 6.6 per cent of current receipts at end-March 2025 from 6.7 per cent at end-March 2024 ([Table 5](#)).
